Surveys and Professionals

EHS Technicians  
and Program Management

EHS Consulting Services

#### OVERVIEW

HazTek partners with a fortune 100 global biopharmaceutical company to ensure consistent Environmental, Health, and Safety (EHS) performance across its construction, facility operations and maintenance, and general operations activities. Since 2004, BMS has come to rely on HazTek’s versatility, responsiveness, and diverse expertise as its preferred provider of EHS professionals, consulting, and training support.

Initially, this global biopharmaceutical company partnered with HazTek to address inconsistencies in EHS policies and execution throughout the Connecticut and Central New Jersey region. At that time, contractors working at multiple campuses across the region experienced confusion and unnecessary work delays related to variations in EHS requirements and enforcement from site to site. HazTek worked with the company to create a Regional Contractor Safety Management program that established universal and consistent protocols for the region. Additionally, we provided a team of contractor safety professionals to coach contractors and internal employees — which creates acceptance and support from internal and external project teams.

Today, our team is considered a trusted partner toward the success of all projects. Our footprint with this company has expanded to over 15 facilities throughout North America.

#### UNIQUE CHALLENGES

In 2019, our client acquired another global biopharmaceutical company that necessitated an integration of the two companies’ EHS cultures. HazTek has played a vital role throughout this important and difficult transition due to our intimate knowledge of internal EHS policies, procedures, and performance expectations. As an extension of this company, we provide ongoing support to help legacy employees to assimilate into our client’s world-class EHS culture.
