August 2016

LENGTH OF PROJECTS

12 + Months

PROJECT LOCATIONS

Multiple Locations throughout the
U.S. and Mexico

SERVICES PROVIDED

Construction Safety Advisors

Crane Lift Reviews

Energy Marshal Staff

OVERVIEW

HazTek has partnered with a multinational technology company since 2016, overseeing safety on their data center construction projects.

HazTek Safety Advisors serve as owner representatives on our client's data center construction projects, implementing the corporate safety regulations and overseeing the general contractor and sub-contractors. The technology company requires the highest standards of Health & Safety management on all of their construction projects, so our Safety Advisors are senior-level employees who have the top certifications and the highest levels of experience.

In addition to our Safety Advisors who act as owner representatives, HazTek provides Safety Professionals to oversee the safety of our client's data center renovations, as well as energy marshal staff for the control of hazardous energy. We also provide crane lift reviews.

UNIQUE HIGHLIGHTS

Our Safety Professionals oversee anywhere from 150-600 construction workers in high-risk settings. Typical risks include extensive excavation and temporary work; segregation between pedestrians and vehicles; working at height; lifting large, heavy, prefabricated components; and electrical installations that involve potentially energized systems.

Since 2016, HazTek's work with the technology company has grown tremendously. Our work has expanded from seven of their U.S. data center projects to 30 different project locations in the U.S. and Mexico. We are confident that this growth trend will continue.
